Sparkling Water on the Spot

for restaurants, cafes, bars & catering

NASA & NanoCeram[®]

Latest filtration technology jointly developed with NASA that combines nano-filtration and electro-adhesion technologies to eliminate heavy metals, bacteria and viruses, as well as pesticides, agro-chemical, medical and pharmaceutical residues, including penicillin G and antibiotics.

Quality Guaranteed

Natura[®] is produced and supported by OASIS International, a manufacturer established in the U.S. since 1910 and a global leader today in the design and manufacturing of various acclaimed drinking water equipment.

Manufactured In North America

The eco-friendly and superior
alternative to bottled water

6 Reasons How Your Business Can Benefit From Natura Water

1 Gourmet Water to Complement Your Food

Never let an otherwise enjoyable dining experience be ruined again by heavily chlorinated or poor quality drinking water that leaves a bad aftertaste.

Natura's unique approach to "gourmet water" was first developed in Italy, where water, like wine, is considered an essential part of every meal.

The Natura Water System eliminates impurities while retaining healthy minerals – producing great-tasting and thirst-quenching sparkling and still water that is guaranteed to please even the most discerning palate.

2 It's Profitable

Once you have installed our Natura Water System in your premises, you can produce unlimited amount of premium quality sparkling or still water for sale.

The chilled sparkling water can also be used to make fizzy drinks of your own concoction for sale at prices determined by you.

3 Save Storage Space

Keeping a constant supply of bottled water means having to give up expensive floor space to stack and store them. This also includes refrigerator space to pre-chill bottles of sparkling or still water, as well as the space for storing used empty bottles. Our water-on-demand system totally frees you from this predicament.

4 Save Labour and Time

Multiple chores required for handling bottled water: replenishing, moving, keeping inventory and disposing of used bottles – become a thing of the past.

5 Boost Your Brand Image, Make a Difference

By adopting the Natura Water System, your carbon footprint will shrink tremendously, sparing our environment from tonnes of energy emission otherwise incurred by conventional bottled water consumption.

You are also taking a stand against wastefulness and the disposable culture that sees tonnes of empty bottles end up in landfills on a daily basis.

We also maintain a policy to support local charities regularly with proceeds collected from the sale of Natura Water through voluntary contributions from our partners.

From experience, we have discovered that most restaurant and catering proprietors genuinely care for the environment and look to contribute to a better society. Beyond boosting your company's green credentials as well as corporate social responsibility image, we invite you to join hands with us because we believe we can actually make a difference.

6 Be the First

The Natura Water revolution is gaining momentum and popularity. Be among the first to introduce Natura Water to your customers and be ready to serve those who wish to make it a part of their lifestyle choice.

NATURA D3-MODEL 80 Litres Per Hour

Natura Water is the next generation water dispensing system that serves chilled sparkling water, and chilled or ambient still water.

This water-on-demand system fills a 600ml bottle in seconds, eliminating the need for storage of bottled water in store rooms and refrigerators. With a capacity to produce 80 litres per hour of chilled sparkling or chilled still water, it is sufficient even to cater for large corporate offices with many employees and visitors, and for peak periods during major meetings, training sessions and seminars.

STANDARD FEATURES

- Chic Countertop Display
- Space-Saving Design
- No Visible Plumbing Parts
- Connects Directly to Plumbing System

SPARKLING WATER ON THE SPOT

- The Most Refreshing Water Available
- Three-Stage Filtration System
- No Water Shipments
- No Storage Required
- Luxurious Water Bottles

Prominent Natura Customers in the US

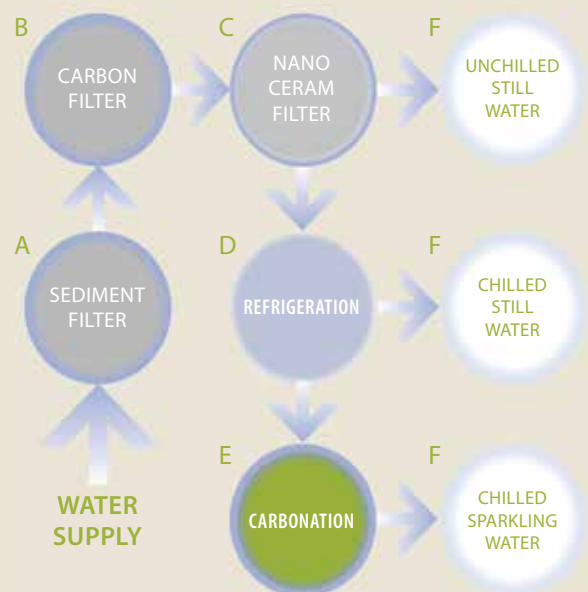

Corporate Offices

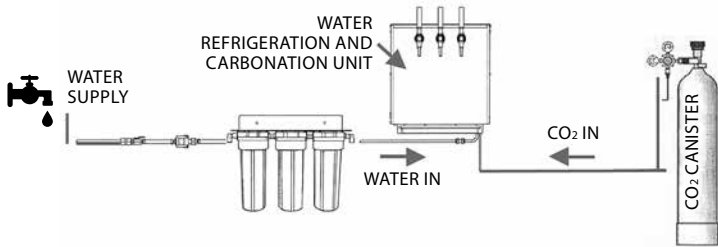

Hotels

Natura's Proprietary 3-Stage Filtration, Refrigeration and Carbonation System

- Sediment Filter: excellent in eliminating particles
- Carbon Filter: removes chlorine and odour, improves taste (CTO) and removes cysts
- NanoCeram® Filter: utilises nano-filtration and electro-adhesion media that totally eliminates particles (as tiny as 0.02 micron in nanometric size) and all soluble organics, chlorine and heavy metals. It is also capable of removing bacteria and viruses as well as pesticides, agro-chemical, medical and pharmaceutical residues, including penicillin G and antibiotics
- Refrigeration System: capable of dispensing large volumes of chilled water at a constant temperature
- Carbonation Tank: pressurised with sensor controls
- Aesthetics: adopts only the finest Italian-made industrial taps

Hi-Tech Process

The Natura Water System was designed to provide great-tasting water in order to enhance the flavours of the finest cuisine. The hi-tech system's proprietary technology allows it to filter, refrigerate and carbonate water on the spot to produce top-quality sparkling and still water.

The first stage of the three-stage filtration system is to filter sediments and suspended particles.

A second stage is performed using a carbon block filter that removes chlorine, heavy metals and soluble chemical compounds including mercury, lead and arsenic while eliminating odour and improving on taste and colour.

The third and final stage is the NanoCeram® filtration that fully removes minute particulate contaminants and remnant heavy metals and soluble chemicals. It is also capable of eliminating pesticides, medical, pharmaceutical and agro-chemical residues, as well as viral and bacterial microbes such as *E.Coli* and the *coliform* bacteria, and other organic and inorganic particles of nanometric size.

NanoCeram® filter was first developed jointly with NASA in 2002, designed for the use by astronauts in space stations. These filter cartridges are manufactured by using 100% FDA-approved raw material.

Finally, its unique refrigeration and carbonation system allows all Natura® units to dispense chilled still and sparkling water at a constant temperature, and at any chosen "BUBBLE" intensity for sparkling water.

The Cost Efficient, Environmentally Friendly Alternative to Bottled Water

Natura Water is produced on the spot and served in stylish glass bottles that are designed to be washed and reused many times.

Our bottles are part of a complete package that provides an environmentally friendly alternative to the waste associated with conventional bottled water.

By eliminating the need for manufacturing, transportation, and disposal of bottled water, the adverse environmental impact otherwise incurred by such large-scale carbon emission is entirely eliminated. Studies have found that the total fossil fuel needed just to produce all the bottles for use within the U.S. each year is sufficient to fuel one million cars on the road for an entire year! Can you imagine the positive impact on Hong Kong's environment even if we manage to save only a fraction of this energy?

With the lowest carbon footprint, Natura Water is indeed the greenest water possible. By switching to Natura®, you can still have your gourmet *eau* in sparkling or still – but without the adverse environmental impact of conventional bottled water.
