**THE BEST
WATER
FOR YOUR
TEAM**

Sparkling Water On the Spot

for premier corporate offices

NASA & NanoCeram[®]

Latest filtration technology jointly developed with NASA that combines nano-filtration and electro-adhesion technologies to eliminate heavy metals, bacteria and viruses, as well as pesticides, agro-chemical, medical and pharmaceutical residues, including penicillin G and antibiotics.

Quality Guaranteed

Natura[®] is produced and supported by OASIS International, a manufacturer established in the U.S. since 1910 and a global leader today in the design and manufacturing of various acclaimed drinking water equipment.

Manufactured In North America

**The eco-friendly and superior
alternative to bottled water**

5 Reasons Why You Should Install Natura Water System in Your Office

1 The Best Water for Your Company's Best Assets

Employees generally spend more time in the office than at home. Installing Natura Water System in your workplace ensures that they only drink the best quality water.

The Natura Water's three-stage filtration system eliminates impurities while retaining healthy minerals – producing great-tasting and thirst-quenching sparkling and still water that is of the healthiest quality standard possible.

2 Boost Productivity

A little appreciation goes a long way. Many find sparkling water more thirst-quenching than still water. Letting your employees have premium grade sparkling or still water on par or better than premium bottled water brands is a thoughtful perk that will go a long way to boost team morale and productivity.

3 Save Money

With a fixed monthly cost, your entire office enjoys unlimited healthy drinking water. This is especially economical for medium-sized companies that regularly purchase large quantities of conventional bottled water for staff and visitors' consumption.

4 It's Green

Conventional bottled water is an industry that consumes massive amount of energy, not only through its manufacturing and bottling processes, but also through the transportation and delivery of water bottles. Just imagine the fossil fuel saved if all the trucks that ply our roads daily to deliver those 17-litre bottled water to offices all over Hong Kong are taken out of the equation!

By switching to Natura Water that is produced on the spot and served in reusable glass bottles, your company's carbon footprint will be significantly reduced.

Let all your employees and guests drink healthy water – but without the environmental impact of conventional bottled water.

5 Boost Your Company's Image, Make a Difference

With the lowest carbon footprint, Natura Water is indeed the greenest water possible! Most people genuinely care and have no hesitation when asked to contribute to the betterment of our environment. Your employees and guests will be delighted to drink Natura Water and embrace its eco-friendly idealism.

Natura Water also maintains a policy to support local charities regularly with voluntary contributions from our partners. Your employees will be encouraged to participate as well.

Beyond boosting your company's green credentials as well as corporate social responsibility image, we invite you to join hands with us because we believe we can actually make a difference.

NATURA D3-MODEL 80 Litres Per Hour

Natura Water is the next generation water dispensing system that serves chilled sparkling water, and chilled or ambient still water.

This water-on-demand system fills a 600ml bottle in seconds, eliminating the need for storage of bottled water in store rooms and refrigerators. With a capacity to produce 80 litres per hour of chilled sparkling or chilled still water, it is sufficient even to cater for large corporate offices with many employees and visitors, and for peak periods during major meetings, training sessions and seminars.

STANDARD FEATURES

- Chic Countertop Display
- Space-Saving Design
- No Visible Plumbing Parts
- Connects Directly to Plumbing System

SPARKLING WATER ON THE SPOT

- The Most Refreshing Water Available
- Three-Stage Filtration System
- No Water Shipments
- No Storage Required
- Luxurious Water Bottles

Prominent Natura Customers in the US

Hotels

Natura's Proprietary 3-Stage Filtration, Refrigeration and Carbonation System

- Sediment Filter: excellent in eliminating particles
- Carbon Filter: removes chlorine and odour, improves taste (CTO) and removes cysts
- NanoCeram® Filter: utilises nano-filtration and electro-adhesion media that totally eliminates particles (as tiny as 0.02 micron in nanometric size) and all soluble organics, chlorine and heavy metals. It is also capable of removing bacteria and viruses as well as pesticides, agro-chemical, medical and pharmaceutical residues, including penicillin G and antibiotics
- Refrigeration System: capable of dispensing large volumes of chilled water at a constant temperature
- Carbonation Tank: pressurised with sensor controls
- Aesthetics: adopts only the finest Italian-made industrial taps

Hi-Tech Process

The Natura Water System was designed to provide great-tasting water in order to enhance the flavours of the finest cuisine. The hi-tech system's proprietary technology allows it to filter, refrigerate and carbonate water on the spot to produce top-quality sparkling and still water.

The first stage of the three-stage filtration system is to filter sediments and suspended particles.

A second stage is performed using a carbon block filter that removes chlorine, heavy metals and soluble chemical compounds including mercury, lead and arsenic while eliminating odour and improving on taste and colour.

The third and final stage is the NanoCeram® filtration that fully removes minute particulate contaminants and remnant heavy metals and soluble chemicals. It is also capable of eliminating pesticides, medical, pharmaceutical and agro-chemical residues, as well as viral and bacterial microbes such as *E.Coli* and the *coliform* bacteria, and other organic and inorganic particles of nanometric size.

NanoCeram® filter was first developed jointly with NASA in 2002, designed for the use by astronauts in space stations. These filter cartridges are manufactured by using 100% FDA-approved raw material.

Finally, its unique refrigeration and carbonation system allows all Natura® units to dispense chilled still and sparkling water at a constant temperature, and at any chosen "BUBBLE" intensity for sparkling water.

The Cost Efficient, Environmentally Friendly Alternative to Bottled Water

Natura Water is produced on the spot and served in stylish glass bottles that are designed to be washed and reused many times.

Our bottles are part of a complete package that provides an environmentally friendly alternative to the waste associated with conventional bottled water.

By eliminating the need for manufacturing, transportation, and disposal of bottled water, the adverse environmental impact otherwise incurred by such large-scale carbon emission is entirely eliminated. Studies have found that the total fossil fuel needed just to produce all the bottles for use within the U.S. each year is sufficient to fuel one million cars on the road for an entire year! Can you imagine the positive impact on Hong Kong's environment even if we manage to save only a fraction of this energy?

With the lowest carbon footprint, Natura Water is indeed the greenest water possible. By switching to Natura®, you can still have your gourmet *eau* in sparkling or still – but without the adverse environmental impact of conventional bottled water.
